ABOUT THIS KIT

This kit includes 7 grams of either green, white, orange, blue or vintage patina glow in the dark pigment and 30 ml of our matte binder.

We believe our glow in the dark powder is the brightest pigment available. It is much brighter than other products available on the internet and is up to 30 times brighter than zinc sulphide based products. Our powder is non-radioactive, non-toxic and is safe to handle.

Our matt binder has been specially formulated to provide a strong, durable fix onto the watch dial. It also allows UV light to pass through so the lume powder can be fully charged.

NEW - Our Vintage Patina Kit now comes with a syringe that contains a color tint. This allows you to add tint to the mix and achieve the exact color/tint of patina you require.

Glow in the Dark Watch Kits

GLOW POWDER AND BINDER INSTRUCTIONS

- 1 :** Before starting expose, the powder to sunlight for 5 minutes to charge it.
- 2 :** Mix a small amount of powder and binder together until a paste like consistency is achieved. If using one of our vintage kits then add a small amount of tint from the syringe to achieve the color you require.
- 3 :** View the mix in a dark room to be sure it is thoroughly mixed.
- 4 :** Apply the lume paste using a fine pointed object (technical pen, needle, watch oiler, etc.) Many users work under a microscope; depending on your eyesight an eye glass may suffice.

Patience, practice, and a steady hand are required but not included, as they are difficult to ship! Store in a cool dark place.

Instruction videos for this and other products can be found at www.WatchLume.com

Glow in the Dark Watch Kits

ACRYLIC WATCH GLASS POLISH

This custom designed kit includes all you need to restore your acrylic/ plastic watch glasses.

Contained in the kit are a syringe (+ micro nozzle) of our polishing paste, 2 sheets of micro grit scratch removal sheets for deeper scratches, and a micro fibre polishing cloth for the finishing touches.

In most cases the polish alone is enough to remove many of the watch glass scratches. We also include sheets of micro fine polishing paper. This extremely fine grit paper will remove the deeper scratches in a watch glass and for a final polish we include a micro fibre polishing cloth.

This same formula is used by the aerospace industry and thus is of the highest production quality to meet their exacting standards. Unlike other products this paste is specifically designed for acrylic/plastic watch glasses and is not a general purpose polish.

KIT CONTENTS

- 1 x 5ml Syringe of Scratch Removing Paste
- 1 x Microfiber Polishing Cloth (5.9x 5.9in / 15 x 15cm)
- 2 x Micro Grit Scratch Removing Papers (2 x 3 in / 5 x 7.5cm)

WATCH GLASS SCRATCH REMOVER.

5ml Syringe of Scratch Removing Paste
1 x Microfibre Polishing Cloth * 5.9x5.9in / 15x15cm
2 x Micro Grit Scratch Removing Papers * 2x3in / 5x7.5cm

Our scratch remover/cleaner paste comes in a handy syringe with a micro nozzle for easy dispensing!

This fine high quality paste is the same technology used in the aerospace industry and provides excellent scratch removal and finish.
